NAME

zathura - a PDF viewer

SYNOPSIS

zathura [-e xid] [-c path] [-d path] [file] [password]

DESCRIPTION

zathura is a highly customizable and functional PDF viewer based on the poppler rendering library and the GTK+ toolkit. zathura provides a minimalistic and space saving interface, with a focus on keyboard interaction.

If instead of a filename - is specified on the command line, zathura tries to render a PDF file piped to zathura via stdin.

OPTIONS

-e xid

Represents to window specified by xid.

-c path

Path to the config directory (defaults to .config/zathura)

-d path

Path to the data directory (defaults to .local/share/zathura)

DEFAULT SETTINGS

Shortcuts

- write** Save the document

Inputbar shortcuts

- Up** Move up in the command history
- Down** Move down in the command history
- Tab | Shift + Tab** Tab completion
- ^w** Delete last word

CONFIGURATION

The complete configuration including the appearance and shortcuts of the program are defined in a separate file named config.h. In this file you are able to change and adjust all the settings of zathura according to your wishes.

In addition you can create a zathurarc file (default path: ~/.config/zathura/zathurarc) to overwrite settings and keybindings by using the set and map function. For more information please check the faq on the website: <http://pwmt.org/projects/zathura>
